

ICRERA 2026

15th INTERNATIONAL CONFERENCE ON RENEWABLE ENERGY RESEARCH AND APPLICATIONS

Abdullah Öztoprak, B.Sc. Student

Turkish-German University, Istanbul, Türkiye

Paper ID : 287

Paper Title : Probabilistic Load Forecasting for Renewable-Rich Distribution Grids:
Multi-Horizon Evaluation and Early Warning of Critical Events

Bio :

Abdullah Öztoprak is a final-year Computer Engineering student at the Turkish-German University. He has completed internships at Tüpraş, Siemens, and Insider, gaining experience in data analytics, industrial automation, and AI-related applications. His current work focuses on probabilistic load forecasting for renewable-rich distribution grids.

His research interests include machine learning, probabilistic forecasting, smart grids, data analytics, and multimodal AI.
