

Short CV

Paper 421

José Luís Sousa is Pro-Rector at the Polytechnic University of Setúbal and Adjunct Professor at the School of Technology of Setúbal. He holds a PhD and bachelor's degree in electrical engineering and the MSc in Systems and Automation, from the University of Coimbra. His teaching and research activities focus on energy efficiency, demand-side management, electricity systems and renewable energy, with particular interest in the impacts of distributed generation and changing electricity consumption patterns. He has authored and co-authored several scientific publications and conference papers in these fields, including research on residential energy efficiency, electricity demand-side management, photovoltaic generation and low-voltage distribution networks.
